PROFILE SUMMARY

Currently pursuing a B.Tech in Computer Science and Engineering with a focus on AI/ML, I have a strong foundation in building intelligent, impactful solutions. Skilled in Python, TensorFlow, PyTorch, HuggingFace, and LangChain, I have developed a range of projects — from spam detection and emotion classification to advanced recommender systems. Driven by curiosity, a strong problem-solving mindset, and a collaborative approach, I am eager to learn and contribute to AI-driven enterprise solutions. Seeking an opportunity to apply my skills, gain hands-on experience, and work in an agile, team-oriented environment.

EDUCATION

- BACHELOR OF TECHNOLOGY (B.TECH)**
AIML (2022-2026)
L.J. UNIVERSITY, AHMEDABAD.
- HIGHER SECONDARY (H.SC)** (2020-2022)
St. Mary's School, Ognaj, AHMEDABAD.
- SECONDARY EDUCATION(S.SC)**
St. Mary's School, Ognaj, AHMEDABAD.

EXPERIENCE

Junior AI/ML Developer Intern, Sparks to Ideas — Ahmedabad (24 Dec–25 Mar)

- Build and optimized 11 machine learning and deep learning projects, focusing on data preprocessing, feature engineering, model design, and hyperparameter tuning to deliver high-performance results.
- Trained and mentored students in AI/ML programming, teaching core Python and advanced machine learning concepts, including model implementation, evaluation, and local deployment.

SOFT SKILLS

- Adaptable
- Fast learning
- Analytical
- Leadership

TECH SKILLS

- Adv Python
- np, pd, mlt, sns
- Scikit-Learn, TensorFlow/Keras
- PyTorch, LLM, RAG
- HuggingFace, LangChain

LANGUAGES

- English, Hindi & Gujarati

OTHER SOFTWARE

- KiCad, Fritzing
- SketchUp, Blender, Solidwork
- Unreal Engine 5, Unity
- Adobe Editors [PS,PR,AE,ME]

PROJECTS

Movie Recommender System

Developed a personalized recommendation engine using collaborative filtering and content-based techniques. Enables users to discover movies tailored to their interests, significantly enhancing user experience.

Emotion Detection

Designed and implemented a deep learning model to recognize emotions from text and facial expressions. Enables sentiment analysis for applications such as customer feedback and user experience improvement.

Dog / Cat Classification

Developed a convolutional neural network achieving high accuracy in differentiating between dog and cat images, demonstrating proficiency in computer vision and deep learning.

AI Chef: Visual Recipe Suggester

This project creates a visual recipe tool using Gemini 1.5 Flash and LangChain. It identifies ingredients from an uploaded image, suggests multiple dishes, and analyzes what you have versus what you need. The app provides tailored guidance and full recipes, turning a photo of your ingredients into a meal plan.

VoiceTone AI (Streamlit App)

Created an interactive application using Gemini 1.5 Flash and Chatterbox TTS to adjust voice tone and grammar. Features customizable voice settings, tone selection, and voice synthesis for personalized speech generation.

YouTube Video Summarizer with Streamlit & Gemini AI

Developed a tool that leverages Gemini AI to summarize YouTube video transcripts, extracting key insights and making video content quickly digestible for end-users.
